Toenail Fungus: A Persistent Problem

by Eunice Ramsey-Parker, DPM, MPH
Clinic Administrator, Foot Center of New York

Toenail fungus, or onychomycosis, is a common problem, but when it’s your problem, it’s ugly and embarrassing and you want it gone. Thick, discolored, and deformed nails are caused by toenail fungus (among other reasons). You might ignore the condition for a while if it’s not painful, but if you have pain, the sooner you visit a podiatrist, the greater the likelihood that the doctor can treat it effectively so it eventually clears up. If a toenail fungus infection is allowed to worsen, that is, to go untreated, the pain might make working or walking difficult.

The infection is caused by fungi, slowly growing microorganisms that are hard to avoid; they thrive in damp areas such as locker rooms, showers, and swimming pools where one is also likely to be barefoot. A prior diagnosis of athlete’s foot, diabetes, poor circulation, an immunodeficiency condition, or trauma due to sports or an injury, advanced age, consistently sweaty feet or other skin conditions are all risk factors and make one more susceptible to fungal nail infections (which can affect hands as well as feet).

To diagnose the condition, a podiatrist would examine the toenails and may send a portion of a nail to a laboratory for a definitive diagnosis, one that would target precisely the organism causing your infection. Treatment could include both oral antifungal and topical medications (both monitored by your podiatrist), and could take months. Even then, the infection might not be permanently cured.

Onychomycosis is difficult to cure because the fungus responsible for the infection grows very slowly, and it is hard to get the medicine under the nail. In some stubborn cases, surgery to remove the nail may be necessary. Removal allows the application of topical medication directly to the nail bed.

Keeping your feet clean and dry are most important for prevention. Also:

- Wear shower shoes in damp public areas.
- Change shoes and socks daily.
- Wear well-fitting shoes. Avoid tight hosiery.
- Make sure all tools used to cut nails are disinfected.
- Trim toenails straight across so they don’t extend past the tip of toes.

Living with HIV/AIDS?

We are the premier Skilled Nursing Facility and Outpatient Adult Day Health Care Program for People living with HIV/AIDS

- The only AIDS Specialty Skilled nursing facility in Harlem
- 5 out of 5 star overall rating
  (Source: www.medicare.gov/nursinghomecompare)
- Staff trained in sensitivity to serve the GLBT community
- Adult Day Health Care for people with HIV
- Approved by Amida Care Provider
- Medical Care & Physical Therapy
- Social Services & Case Management
- Substance Abuse Counseling
- Therapeutic Recreational Activities
- Support Groups
- Nutritional Meals
- Spiritual Counseling & Support

Saint Mary’s Center
Serving Harlem Since 1992
512-516 W. 126th St., New York, NY 10027
212-665-5992 • www.StMarysHarlem.com

Foot Pain? Diabetes?

FOOT CENTER of NEW YORK
55 East 124th St. (between Madison & Park Aves.)

Monday, Tuesday & Thursday
8 am - 4 pm
Wednesday
8 am - 7:30 pm

Medicare, most Medicaid HMOs, and other insurance accepted

Full-Service Physical Therapy Center
Diabetic Wound Care
Expert staff diagnose and treat foot ailments including:
Sports Injuries • Foot Pain • In-toeing • Out-toeing
Flat Feet • Ingrown Toenails • Walking Problems
Heel Spurs • Bunions • Hammertoes

Treating Adults & Children

55 East 124th St. btwn. Park and Madison Avenues, NYC
